

Review questions: Create a regional versioning job

1. How do you enable Pandora to create jobs that combine a base artwork with different content for varying prices or languages?

From **Preferences** > **General** tab, select **Versioning Job**, and set the **Max Layers** value to the number of layers that you need to combine with the base artwork.

2. How do you make it easier to select individual die stations when snapping artwork to die if the base content is already assigned to the die?

From the **View** menu > **Hide Artwork**.
