

# Supported inline spectrophotometers

**Note:** Support for the original Inline SpectroProofer (ILS 20) has been discontinued by Epson. These first-generation devices are no longer supported by Kodak Proofing Software. They may continue to work, but replacement with a newer model is recommended.

- Epson Stylus Pro 4900, 7890, 7900, 9890, or 9900 printer and inline spectrophotometer equipped with either the SpectroProofer ILS (with UV-cut filter or unfiltered) or ILS30 (Mx) head

**Note:** Replacing an ILS with an ILS30 also requires a printer firmware upgrade.

- Epson SC-P5000, P6000, P7000, P8000, P9000, P7570, P9570 printer and inline spectrophotometer equipped with ILS30 (Mx) head

**Note:** ILS20 heads are not supported on the P-series printers.
