

Visualization Toolbar: More Options

In this discussion we will go a bit deeper into the tools available to help focus on the dashboard shown.

NOTE: This is a generic introduction to help familiarize yourself with the core components available.

Items that are specific to a particular Dashboard will be discussed in greater detail within each specific Analytic offering.

- (...) Dot, dot, dot – presents the More options menu. While this could vary depending on the dashboard currently selected, these at minimum would be offered:

- **Export** data - allows you to make selection on how to export that data defined in your dashboard
- **Show as a Table** - toggles from the chart based view to a table
- **Spotlight** - dims the rest of the display to only show the current dashboard
- Sort descending - sorts items A-Z, 0-9
- Sort ascending - sort items Z-A, 9-0
- and other 'Sort by' options, which entirely depend on the dashboard you are in.

Other View Options:

These options may be available within certain dashboards.

	Table view - by clicking on this icon within a current chart view - it will switch to a table display of all the items used to define the chart currently shown.
	Chart view - by clicking on this icon within a table view - it will switch to a chart display of all the items used to define the table currently shown.
	Switch to horizontal layout - this will take all the displays and rotate them horizontally to the available view space.
	Switch to vertical layout - this will take all the displays and rotate them vertically to the available view space.

For more information:

- [Dashboard Introduction...](#)
- **Analytics User Interface** - overall view of the dashboards
- **Dashboard Types** - what type of visual are shown within the dashboards
- **Filters** - details in which to hone (focus) the details within the dashboards
