

Quick Start Guide - Archive Storage

In this section you will learn about **PRINERGY** Cloud Archive Service if this has been enabled for use with **PRINERGY** Portal: Archive Analytics

Depending on the **PRINERGY** license, **PRINERGY** Cloud Archive Service may be installed and enabled on your **PRINERGY** server. The default process templates are updated and a read-only RBA rule set ("Archive Purge Overnight") is added to the server. This allows you to perform immediate and automatic archiving of jobs.

The process templates are used by the read-only RBA rule.

The following process templates are modified to include your **PRINERGY** Cloud Archive storage as an archive location:

- **Archive > Archive > ArchiveSelected**
- **Purge > Purge > PurgeSelected**
- **Retrieve > Retrieve > RetrieveSelected**

Depending on your needs, you have the following Archive options:

- **Manual** Archive, Purge and Retrieve operations
- **Automatic** Archive/Purge operations
