

Ink Analytics: Resources and Print Conditions

In this section we will discuss aspects of Ink Analytics that are needed to utilize the service.

Here we will highlight the items required to correctly implement and use Ink Analytics.

1. Define the **preferred** unit of measure, weight and currency that is used within your production environment. See **Preferences** for more detail.
 2. Define the **Resources** needed:
 - a. **Presses** - specifications must include: **Name, Manufacturer, Mode ID, Type** and **Fountain Solution** used
 - b. **Substrates** - specifications must include: **Name, ID, SKU, Manufacturer, Product Name, Type, Weight(g/m2), Price Per Unit** and you can provide an optional **Description**
 - c. **Plates / Cylinders** - specifications must include: **Name, Manufacturer, Model ID, Model Name** and **Dimension**
 - d. **Inks / Coatings** - specifications must include: **Name, ID, SKU, Color Type, Manufacturer, Product Line, Base** and **Price**.
NOTE: Although you have defined a **preferred** unit of currency and weight, you can choose other units to meet your ink /coating manufacturers' specifications. **PRINERGY** Portal does not convert these values to match your **Preference**.
 - e. **Print Conditions** - combines the above items to define a singular relationship to match your uniquely specified Production needs.
-
