

# Separations Dashboard

In this discussion we will explore the Separations dashboard.

In the **Separations** dashboard, you can view the following reports:

Number	Name of report /chart	Description
1	<b>Output Separation by Date</b>	Displays the number of separations that were created (usually this information is equivalent to the number of plates that were used).

2	<b>Most Used Templates</b>	Displays the 10 most used process templates in a descending order.
3	<b>Separations by Template Group</b>	<p>Displays the number of separations that were produced by a specific process template group.</p> <p><b>Note:</b> You can drill down into the details of a template group by clicking its name. The report will show the number of separations that were produced by each template in a specific group.</p>
4	<b>Separations Distribution</b>	Displays the number of the separations that were produced in a specific hour, relative to other times in the same day of the week. The darker areas indicate that a larger number of separations were produced at that time.
