

# PRINERGY Access System Requirements

## Web Browsers

PRINERGY Access is accessed and administered through a web browser.

The latest versions of the following browsers are supported on Mac and Windows OS.

Browser	OS and Version
Chrome	Mac and Windows
Firefox*	Mac and Windows
Edge	Windows only
Safari	Mac only

\*Firefox: some widgets may not work correctly in Firefox with Digital Press PDR dashboards.

## Cloud Connector Output

In order to automate output of PDFs to hot or static folders using Workflow Pipelines, it is necessary to have **Cloud Connector** software installed and configured on the Tenant network.

The **Cloud Connector** downloads PDFs from PRINERGY Access in the cloud and copies them to designated shares on the customer network.

Cloud Connector software runs within a **Virtual Machine** installed on-premise at the Tenant site. The Cloud Connector Virtual Machine is available for **Microsoft Hyper-V** or **VMware ESXi** hosts, running on either a Hyper-V server (Windows 10, 11, 2016 or 2019) or an ESXi VMware host (vSphere 6.5 and higher).

Kodak expects that many customers will choose a Hyper-V host running on an existing Windows 10/11 computer, as Hyper-V is included as part of Microsoft Windows operating Systems. Customers with more expertise with virtualization may choose to deploy on existing Hyper-V or VMware ESXi hosts

## Cloud Connector System Requirements

The system requirements for running the VM are minimal:

- Single core CPU
- 2GB RAM
- 20GB free disk space.
- **Windows OS:**
  - Windows 10 Pro (or higher)
  - Windows 11 Pro (or higher)
  - Windows Server 2016
  - Windows Server 2019
