

Adding a new press model

The press model define the model of each press; offset or digital. The model consists of printing units and perfecting units.

You can either import a list of some of the most common press models from an xml file or add a new press model.

1. In the top bar of the Console, click the **Resources** tab.
2. On the **Resources** tab, select **Press models**.
3. Click the **Add new**  button.
4. In the Add press model dialog box that appears on the right, leave the **Id** as is, and in the **Label** box, type 8 color sheet-fed with perfecting unit.
5. (Optional) In the **Description** box, type Sheet-fed offset press 8 color with perfecting unit.
6. In the **Method** area, select **Offset**.
7. In the **Feed** area, select **Sheet**.
8. In the **Units** area, click the **Add new**  button and select **Add perfecting unit**.
Note: For a sheet-fed press, you should always start and end with two manual perfecting units for tumbling and turning. In between, you can define printing units and maybe an automatic perfecting unit.
9. Make sure that the **Flipping style** of the Perfecting unit that was added is **Turn** and that the **Manual** check box is selected.
10. Add another Perfecting unit and make sure that the **Flipping style** of the Perfecting unit that was added is **Tumble** and that the **Manual** check box is selected.
11. Click **Save**.
A new press model was added.
