

Dashboard data display

Display Times

Times reported in Dashboards (such as in heat maps) are based on the time zone configured in [Preferences](#),

Preferences are found in the PRINERGY Portal Services view, under the [Administration](#) tab.

Refresh frequency

Once data is uploaded from a PRINERGY system to the cloud, it can then be displayed in Analytics Dashboards.

Refresh times for Dashboard data depend on the process involved, **see chart below**.

Note that times given below indicate when the intervals at which data uploads are initiated, but don't indicate actual upload time, which are volume dependent.

A data upload may be initiated every hour, but may then take another hour to upload, so data wouldn't be available in dashboards for two hours.

Dashboard Name	Rate
Archive Activity	Almost in real time
Cloud Archiving	
Ink Usage (Loose Page)	
Plate Usage	
Server Metrics	
Imposition Template	Once 0.5 hour
InSite User Activity	
Ink Usage (Imposition)	Once 1 hour
JTP	
PDF Approval	
PDF Processing	
Separations	
Prinergy user Activity	
Process Template	

History	Once 1 day
Job Activity	
PDF Creation	
Insite Active Job	
Press Tracking
