

Creating a remotely started rule

Create a rule that can be triggered remotely.

1. Open Rule Set Manager, and click **New Rule Set**.
2. On the **Events** tab, in **Targeted Events**, drag **Remote Trigger** to the workspace.
3. On the **Actions** tab, drag an action to the **Action** icon.
For example, in **System Actions**, drag **Email** to the **Action** icon.

4. Double-click the line between the event and action, and set the parameters.
For example, in the **Subject** row, type a subject such as `Testing Remote Trigger`. In the **To** row, type your e-mail address, and click **OK**.
5. Save, close, and enable the rule set.

Use the Raise Event tool to start this rule, or create a rule that uses the **Send Remote Trigger** action to start this rule remotely.
