

Creating a G7 print calibration curve

1. In the **Print Curves** tab, under **Calibration Curves**, click the **Add** button .
2. [Add the print device](#) and drag it to the viewer window.
3. Click the **Properties** icon  and [define the device condition properties](#).
4. Create a measurement chart and measure device output samples:
 - a. Click the **Measurement** icon .
 - b. Perform one of the following actions:
 - If you already have a P2P25, P2P51, or other measurement data file for your print device, you can [import it](#).
 - [Measure a built-in P2P or P2P51 chart](#).
5. Define the G7 calibration:
 - a. Click the **Calibration** icon .
 - b. If you do not want the curve to be visible in Prinergy, clear the **Show in Prinergy** check box. This is selected automatically for new curves.
 - c. Click the **Process Inks** tab and select **G7**.
 - d. Click **OK**.

Note: If the calibrated output device condition has [extended process inks](#), they are calibrated to linear [Spot Color Tone Value \(SCTV\)](#) response.
