

# Showing color setups in Prinerger

You can make a color setup visible in Prinerger Process Template Editor, Job Attributes, and UADM Default settings.

1. Click the **Color Setups** tab.
2. In the **Color Setups** list, find the desired color setup and select the **Show in Prinerger** check box (you may have to expand the first column on the left side to see the title). If the **Show in Prinerger** column does not appear, you need to check the [show the Prinerger Workflow settings](#) checkbox under **Preferences / User Interface**.

**Note:** If you clear the check box for a Color Setup that is selected in an existing process template, job or UADM Default settings, the Color Setup information and contents will still be delivered to Prinerger for output.
