

# Configuring data purges

Use the **Configuration** tab in the Administration Client window to set time limits for retaining production reporting data before it is purged.

1. In the Administration Client, click the **Configuration** tab.
2. Click the **Data Purge** triangle to expand the pane, and set up the options.

Option	Description
<b>Prepress Events</b>	Number of days to retain job-processing events in the database before automatically deleting the process data
<b>Deleted Prepress Jobs</b>	Number of days to retain a job's processing and MIS-to-prepress ID mapping information after the job is destroyed in Prinergy

3. Click **Save**.
4. On the **Status** tab, restart the connectors either now or when you finish setting up the **Configuration** tab.
  - If a connector is currently stopped, click **Start**.
  - If the connectors are currently running, click **Stop**, and then click **Start**.
5. Click **Refresh**.
