

Converting a SmartMark to a simple mark on the layout

You can convert any instance of a SmartMark in a job to a simple mark by unlocking it. As a simple mark, the mark is limited to the current position.

1. In the layout, select the mark.
2. On the **Geometry** palette, click the **Lock** icon.

The **Lock** icon changes from locked to unlocked, indicating that the SmartMark has been converted to a simple mark. If you lock the mark later, it becomes "smart" again, but it doesn't reposition itself until the next time you replace the media or die to which it is anchored.

Note: Only the selected instance of the mark in the job is converted to a simple mark. Any other instances of this SmartMark in the job, and the original SmartMark on the **Marks** palette, remain unchanged.
