

Changing the color order

Marks that use the predefined color names in the Pandora software print using job colors in the order shown on the **Output Setup** tab in **job properties**. To ensure that marks print in the colors you want, you can drag the colors on the **Output Setup** tab to change their order.

1. In **job properties**, click the **Output Setup** tab.
2. On the **Output Setup** tab, click **Color Separations**.
3. On the lower part of the tab, click and drag the colors to arrange them.
4. To verify that the colors you want will be used for a mark, click the **Content** tab and select the mark.
The colors are listed in the order that you arranged them.
5. (Optional) If you do not want a particular color to be used in marks for the entire job, from the **Used in Marks** list, select **No**.
