

# Automated import of a populated JDF imposition created with Prinergy Evo workflow

**Important:** In order to complete the following tasks you must first complete the first task of the manual import activity.

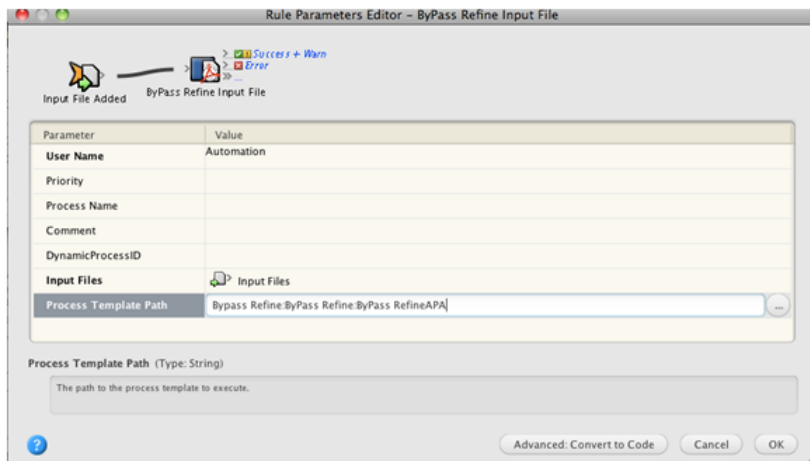

- Create an RBA rule that Bypass refines input files added to the job
- Create a Prinergy job and enable the RBA rule
- Create a job hot folder to automatically import JDF files
- Automatically import a populated JDF into Prinergy job by a hot folder submission

## Create an RBA rule that Bypass refines input files added to the job

1. From the **Tools** menu in Job Finder, select **Rule Set Manager**.
2. Create a new rule set with the events and action as follows:

3. In the Rule Builder window, double-click the red line separating the **Input File Added** icon and the **ByPass Refine Input Files** icon.
4. In the Rule Parameters Editor dialog box, click the text (**Enter a Value**) next to **Process Template Path**.
5. Select the **Bypass Refine** process template that you created in the previous task, and click **OK**.

6. Name the rule `XXInputAddedByPassRefineAPA`.

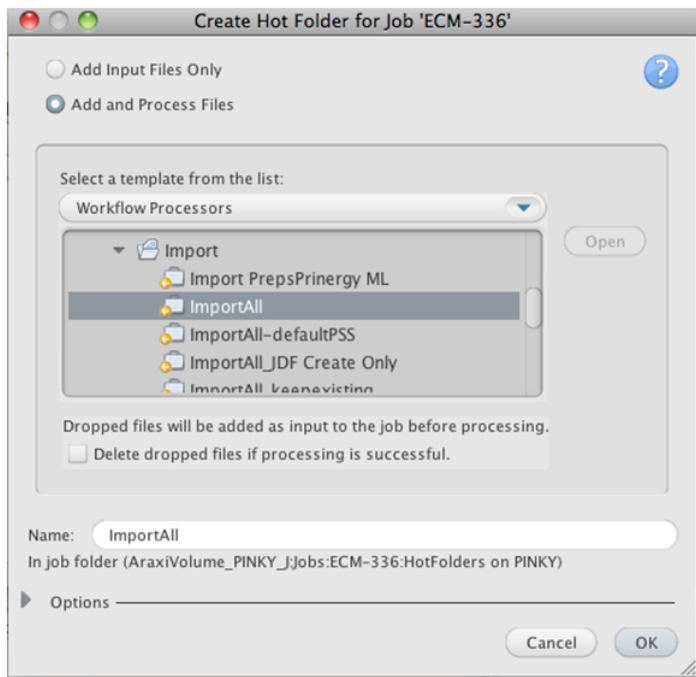

## Create a Prinergy job and enable the RBA rule

1. In Job Finder, right-click the **XXTestGroup** and select **New Job**.
2. Type the job name `XXJob##` (where `XX` represents your initials and `##` represents the activity number).
3. Click **Create**.
4. In Job Manager, from the **Tools** menu, select **Rule Set Manager**.
5. Select the rule that you created earlier and enable it in the job.

## Create a job hot folder to automatically import JDF files

In this task, a job hot folder is created that will automatically create a job (based on the template job), name the job using defined source and target naming patterns, and direct input files to a hot folder for automatic processing.

1. In Job Manager, from the **Jobs** menu, select **Manage Hot Folders**.
2. In the Manage Hot Folders dialog box, click the **Add** button.
3. In the Create Hot Folder dialog box, select the **Add and Process Files** option.
4. In the **Process Template** list, locate and select an **Import** process template.

## Automatically import a populated JDF into Prinergy job by a hot folder submission

1. Move the `KodakOneMagEvoReprint` populated JDF, `JDFMarksFlats` folder, and the Prinergy Evo refined pages to the hot folder you created earlier.
2. View the imported impositions as thumbnails in the **Signatures** view.
