

# Layout view

The **layout** view is a visual representation of the job. You drag materials and equipment to the layout from the **ShopMap** palette, and you drag artwork, dies, and marks to the layout from **job properties** and the **Marks** palette.

The layout background is a pasteboard that you use to lay out your job.

If the default pasteboard size is too small for a job, the pasteboard automatically expands to accommodate the job, up to a maximum size of 3.66 x 3.66 meters (200 x 200 in.).
