

Saving a job layout in integrated mode

You can save a layout as a job ticket or you can save a copy of the job as a template.

Each time that you save a Pandora job, it creates a job ticket <layout name>.in.jt in the Transient Layouts folder of your Prinerger Workflow job. Pandora and Prinerger Workflow use the job ticket in the Transient Layouts folder to transfer information and provide a backup. If the Prinerger Workflow software stops responding, you can retrieve the layout from the last saved state by importing the job ticket file in Workshop.

The Save As dialog box opens the first time you save a job as a job or a template, and when you select **File > Save As**. If you have previously saved a job, the Pandora software saves it automatically when you select **File > Save**.
