

Marks overview

A variety of marks are available in the Pandora software, and you can access them from the **Marks** palette. You can also import custom PDF marks to the **Marks** palette. Marks must be in PDF format. For information about saving marks in the Pandora software, see [Creating marks in Adobe Illustrator for use in Pandora software](#). (This document is also available in the **Documentation** folder.) You add a mark to a job by dragging it from the **Marks** palette to the required location in the **layout** view.

You can preview a mark by clicking it on the **Marks** palette. You add custom marks to the **User** folder. You can also set up a hierarchy of subfolders within the **User** folder to organize your marks, and you can create a folder of marks (mark set) that you can apply to jobs by dragging the folder from the **Marks** palette.

Some of the provided marks are SmartMarks that have intelligent functionality. You can edit a variety of settings for SmartMarks, and you can convert marks to and from SmartMarks.

You can also create mark sets that you can save and reuse.
