

Changing the font of a label mark created in Adobe Illustrator CS or CC

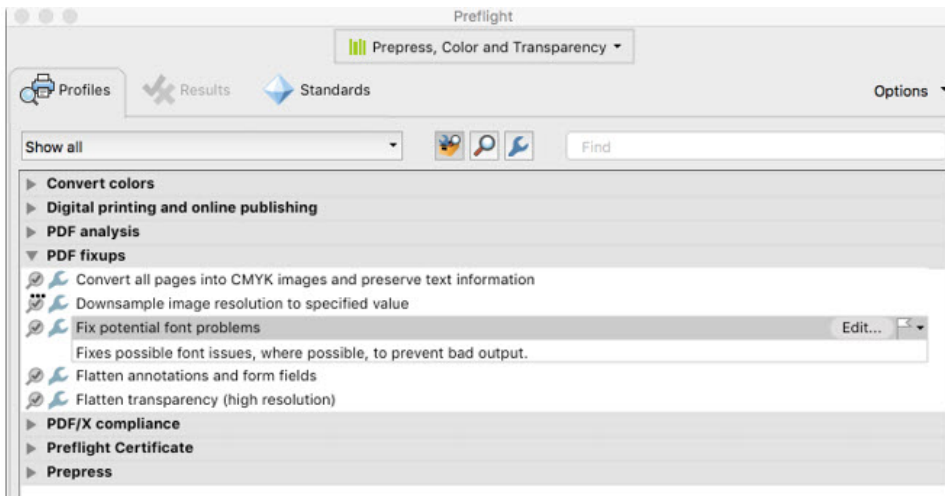

Before you can use the label mark that you created in Adobe Illustrator in Pandora, you must ensure that the fonts are embedded and not subset. If they are subset, you must use preflight in Adobe Acrobat to embed them.

To change the font in Adobe Acrobat:

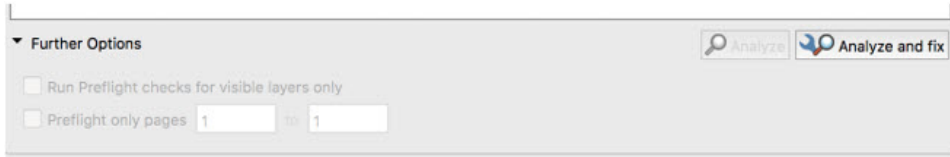

1. In Acrobat DC, open the PDF that you just saved.
2. On the Mac, go to **Acrobat Menu File > Properties**.
3. Select **Fonts** and check whether they are **Embedded** or **Embedded Subset**.

- If they are **Embedded**, you are done.
 - If they are **Embedded Subset**, continue to the next step.
4. Close the Properties window and launch Acrobat Preflight.
 5. In Acrobat Preflight, select the **Prepress, Color, and Transparency** group.
 6. Under **PDF fixups** select **Fix potential font problems**.

7. To embed all fonts, click **Analyze and fix**.

8. On the Mac, go to **Acrobat Menu File > Properties**.

9. Select **Fonts** and confirm that they are now **Embedded**.
