

Running PLASubService software on a Prinergy Workflow secondary server

PLA SubService is a Microsoft Windows service. Use this procedure to start the service following installation. After performing this procedure once, the service starts automatically when you restart the server.

These instructions apply to each installed instance of PLASubService. The maximum number of running services depends on how many Prinergy Workflow secondary servers are available for load balancing.

1. Perform one of the following actions:
 - Select **Run** and type `services.msc`
 - Right-click **My Computer**, select **Manage**, and go to **Configuration > Services**.
2. Find **PLASubService** and double-click it.
3. In the PLASubService Properties dialog box, click the **Log On** tab.
4. Select **This account** and enter the user name and password.
Important: Use the same administrator account that you use on the Prinergy Workflow primary server to run the PLA Server software.
5. Start **PLASubService**.
