

Importing ShopMap resources from Pandora

You can import ShopMap resources from the Pandora software to save time. PLA is able to import .dat files that reference Pandora resources. See the *Pandora User Guide* for more details.

1. Click the **ShopMap** tab.
2. Click the tab for the type of resource you want to import—for example, **Press** or **Plate**.
3. In the Import ShopMap dialog box, navigate to the file that you want to import.
4. Select the file, and click **Open**.

Note: You cannot import a resource that has the same name as another resource that is already in this **ShopMap**. You can have two resources with identical settings, but they must have different names.
