

Setting the Marks folder location

Enable PLA to access your folder of existing marks.

1. Depending on your operating system, perform one of the following actions:
 - On an Apple Macintosh client computer: Choose **Layout Automation Manager > Preferences**.
 - On a Windows OS-based client computer: Select **System > Preferences**.
2. In the Preferences dialog box, in the **Marks Folder** box, browse to the location of your Marks folder.

After configuring the PLA software, you can use preferences settings to customize how information is displayed for all users. For more information, see the [Packaging Layout Automation User Guide](#).
