

# Accessing the Default Value Manager

Additional preferences are not shown in the Preferences dialog from the main user interface and were only stored in the **DefaultUser.properties** file on the PLA server. The **Default Value Manager** provides access only to Administrators from the **PLA Manager** on Mac or Windows OS-based client computers.

1. Depending on your operating system, perform one of the following actions:
  - On an Apple Macintosh client computer: Choose **Layout Automation Manager > Default Value Manager**.
  - On a Windows OS-based client computer: Select **System > Default Value Manager**.
2. In the **Default Value Manager**, select a **Category**, and, if necessary, adjust the default value for the properties shown.
3. Click **OK**.
4. Restart **Prinergy** to put the changes that you made into effect.
