

# Creating a new layout ticket from an existing ticket

Create a new layout ticket from an existing ticket to save time and effort.

**Note:** The fields in the New Layout dialog box are user-configurable. They may have been renamed.

1. On the **Status** tab, double-click the existing layout ticket to open it.  
**Note:** If tabbing is enabled on the **Configuration** tab, you can use the Tab key to quickly move through the fields of the dialog box.
2. If the original layout was subsequently edited in the Pandora software, the following message appears: `Warning. Layout has been edited in Pandora since it was created in Layout Automation.` Select one of the following options:
  - **Ignore Changes** discards all changes that you made in Pandora.
  - **Merge** opens a chart that shows all the changes that were made in Pandora. You can use the edited object or the original object in PLA.
  - **Use Changes** accepts all the edits that were made in Pandora in the new layout.
3. In the New Layout dialog box, **Job Name** box, type a new name and make any required changes.
4. Click **Send to Prinergy**.  
A job that contains the new layout is created in Workshop.
