

Reordering the imposition plan reader list

If creating an imposition plan via Prinergy Evo's create imposition process template, you can reorder the reader list when you submit the input files for processing via the template palette. You cannot reorder the reader list if you submit the input files to a hot folder. If you submit files to a create imposition hot folder, Prinergy Evo creates the readers list based on the alphabetical order of the input files.

1. From the mounted folder, drag the input files to the template palette's create imposition process template icon.
2. In the Process Start dialog box, **list of input files** area, reorder the reader list by dragging the input files up or down the list.
The **Pages** column displays the corresponding page number of each input file listed.
3. Click **Go** to create the populated imposition JDF file.
