

# Deleting traps

Delete traps from PDF files with the Kodak PDF Trap Editor plug-in before editing the pages, as you may be unable to delete traps after editing PDF page content. As a result, the traps may remain in the file, appearing as errors in the proof or plate.

1. Double-click on a PDF file or page to launch Acrobat software.
2. From the **Tools** menu in Acrobat software, select **Kodak PDF Trapper** and then **Kodak PDF Trap Editor**.
3. Click the **Delete all traps**.
4. Close the Trap Editor window.
5. Save the PDF file.
