

# Outputting DCS vector files

1. From the **Configure** menu, select **Process Templates**.
2. In the **Process Template Editor** dialog box, click **Output from PDF** group to display the output from PDF process templates.
3. Double-click the process template you want to edit, or [create a new process template](#).
4. From the **Output To** list, select **DCS Vector**.
5. In the **Render** section, in the **Pool** list, select the JTP for **DCS vector** processing.
6. In the **File Format** section, set the parameters as required. The following options are specific to generating DCS vector files.
  - **DCS File Format**
  - **Add TIFF Preview to DCS Master File**
  - **Preserve Page Offsets**
  - **Render Shadings**
  - **Font Outlining**
7. Save the process template with a name that indicates it generates DCS vector files.
