

Assigning a screen for a color

1. [Create a process template](#).
2. In the **Calibration and Screening** section in the **Screen Color** box, type the name of a spot color or type `Default` to create a default screen angle.
Note: Color names must be entered with correct capitalization and spacing.
3. In the **at Angle** list, select a screening angle.
4. Click **Add/Modify**.

Note: To swap two screens (for example, magenta for black), add entries for both colors. In this example, add an entry for magenta to be screened as black and one for black to be screened as magenta.
