

Editing hot folders

The Prinergy Evo server computer must have read, write, and modify privileges on the folder from which you submit input files to Prinergy Evo. Kodak recommends that your hot folders be created in the shared **HotFolders** folder on the Prinergy Evo server computer.

1. From the **Configure** menu, select **Hot Folders**.
2. In the Hot Folders dialog box, select the hot folder you want to edit.
3. Click **Edit**.
4. If you want to change the attached process template or its processing criteria, in the Edit Hot Folder dialog box, **Assigned Process Template** list, select the process template you want to change.
5. Click **Edit**.
6. In the Assign Process Template dialog box, in the **Choose a Process Template** list, select the new process template that you want to attach to the hot folder.
7. In the **Template will be used to process** area, select a new option if required.
8. Click **OK**.
