

Copying colors between libraries

You can copy colors from a factory library into user libraries or between user libraries, by copy and paste, or by drag and drop:

1. From the **Configure** menu, select **Color Database Editor**.
2. In the Color Database Editor dialog box, **Color Libraries** list, select the Factory Library whose color recipe you want to copy.
3. In the **Colors** list, select the color you want to copy.
4. From the **Edit** menu, select **Copy**.
5. In the Color Database Editor dialog box, **Color Libraries** list, select the User Library to which you want to copy the factory color recipe.
6. From the **Edit** menu, select **Paste**.
7. If the color already exists in the user library in the Color Exists dialog box, select either **Replace** or **Rename**, to either replace the file with the same name or to add the new color recipe.

The factory color recipe appears in the User Library's **Colors** box.
