

# Setting processing priority

You can change processing priority via the Template Palette.

1. In the **Process Start** dialog box, **Priority** box, move the pointer up or down the scale to change the file's processing priority.  
The text beside the scale changes to reflect the new priority setting: **Low Normal, High, or Urgent Priority**.
2. Set the remaining parameters as required.
3. Click **Go** to submit the file.

Prinergy Evo software moves the file in the queue according to its priority setting. Files with higher priority are processed sooner when competing for the same JTPs.
