

Previewing PDF files via the virtual proofing system software

Once you have refined input files to create PDF files, preview the pages layout and geometry on-screen using the Prinergy Virtual Proofing System (VPS) software. See the Virtual Proofing System User Guide for more information on how to preview files.

1. Submit the PDF files you want to preview to a Virtual Proofing System output process template submission channel. The PDF files can be single page or imposition.
The system outputs .vps files.
2. Start the Prinergy Virtual Proofing System (VPS) software.
3. From the folder on which you saved your Virtual Proofing System output files, open the .vps files that you want to preview in the Prinergy Virtual Proofing System (VPS) software.
4. Preview the files.
