

Removing processes

You may remove entire processes if, for example, you are troubleshooting a problem and have submitted the process many times and want to be able to manually delete the old processes.

1. In the Process Viewer, select the process.
Note: You must select the entire process, you cannot remove individual items within a process.
2. From the **Edit** menu, select **Remove Item**.
3. When prompted, click **Yes** to confirm that you want to cancel the process.
