

# Installing unprotected fonts

There are two types of fonts: unprotected (data fonts) and protected (PostScript fonts).

To install unprotected Chinese fonts, copy the font files to specific folders on the Prinergy Evo server computer:

- Copy all files in the fonts CID\CID folder to Program Files\Kodak\Prinergy Evo (version number)\static\_data\common\Resource\CID.
- Copy all files in the fonts CID\CMap folder to Program Files\Kodak\Prinergy Evo (version number)\static\_data\common\Resource\CMap.
- Copy all files in the fonts \IDFont folder to Program Files\Kodak\Prinergy Evo (version number)\static\_data\common\Resource\CIDFont.
- For Dyna\_TWN fonts only, also copy all files in the fonts Fonts folder to Program Files\Kodak\Prinergy Evo (version number)\static\_data\common\Fonts.
