

Creating monotonic curves with flat segments

Harmony (Legacy software) allow users to create monotonic curves with flat segments.

Note: KODAK COLORFLOW does not support creating monotonic curves with flat segments to ensure curves created are smooth to prevent printing artifacts.

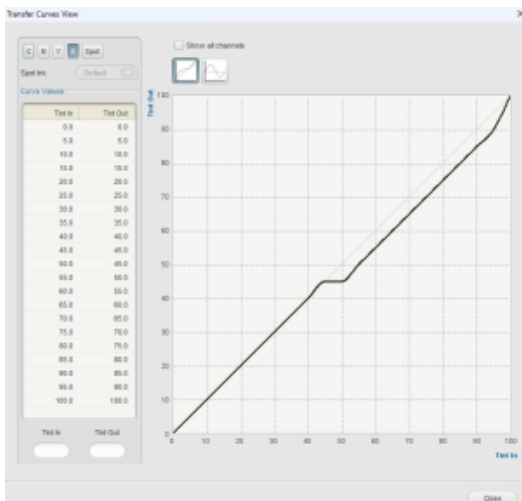

Solution:

In COLORFLOW 11.6 and later, users can create monotonic curves with flat segments by creating a **Transfer Curve** with the option **Harmony Legacy Mode** (Used for creating flat segment curves only) selected.

- **Note:** Transfer Curves created with flat segments cannot be adjusted.

Curve Name:

☒ Show in Prinergy ☒ Harmony Legacy Mode (Used for creating flat segment curves only)
