

Uninstalling Workshop and other software

Use the Uninstaller Wizard to remove software installed by the Workshop installer on client computers in order to perform a fresh install.

1. Perform either of the following actions:

- (Mac OS) Choose **Go > Applications**, locate the /Kodak/Prinerger/Uninstall folder, and select the Uninstall Workshop file. In the Authentication dialog box, click the **lock** icon, type the Administrator password, and click **OK**.
- (Windows) Select **Start > Settings > Control Panel > Add/Remove Programs**, find the Workshop version that you want to delete (the Workshop program appears as **Prinerger Client**). Click **Change/Remove**.

The Uninstaller Wizard starts.

2. Select **Complete Uninstall** to remove all software (for example, Workshop, plug-ins for Acrobat, Prinerger VPS, Preps Workshop edition, and the Prinerger refiner PPD), or select **Uninstall Specific Features** to remove only specific software.
3. If necessary, restart the computer.

Note: When the Workshop installer is run in Japanese on Japanese localized OS on the uninstall app is not copied to the application folder. You must manually remove Workshop. PRINERGY-42828
