

Uninstalling plug-ins on a Mac client computer

Remove from a Mac client computer any Kodak plug-ins for Acrobat that you do not need.

1. In Finder, click the **Go** menu while holding the Option key, and select **Library**.
2. In the Library folder, navigate to: Application Support/Adobe/Acrobat/<version>/Plug-ins.
Note: for <version>, navigate either to 11 or DC depending on the version of Acrobat installed.
3. Select the plug-ins you wish to delete and drag them to the Trash.
4. If the Authentication dialog box appears, click the **lock** icon, and type the Administrator password.
