

Uninstalling plug-ins on a Windows-based client computer

Remove from a Windows-based client computer any Kodak plug-ins for Acrobat that you do not need.

1. Go to the Acrobat folder for your version of Acrobat.
For example, go to C:\Program Files\Adobe\Acrobat <x>\Acrobat\plug-ins\Prinergy.
Note: The file path may be slightly different, depending on your version of Acrobat.
2. Right-click the plug-ins that you want to delete and select **Delete**.
