

Insite JTPs

Two dedicated JTPs are available for proofing and color matching for InSite 6.1.1—**Insite Proofing Device (265 MB)** and **Insite Color Matcher**. These JTPs are used only by InSite, and are used to ensure that the InSite proof is rendered in a way that is similar to the Prinergy final output.

While there are other JTPs for proofing and color matching in Prinergy, having separate JTPs for Prinergy helps avoid situations where InSite and Prinergy share the same JTP resource and affect each other's performance.

These two new JTPs require licensing, and one instance of each is provided for free.
