

Creating a JTP pool

Create a pool so that Prinergy automatically distributes tasks to individual JTPs and, therefore, automatically process multiple jobs at the same time.

Important: All JTPs in a pool must have the same features selected.

1. Click **JTP > Create JTP Pool** and select a pool type.

Type	Description
Archive /Retrieve	Archives and Retrieves jobs
CEPSConversion	Converts Brisque CT/LW and TIFF/IT P1 pages to composite PDF 1.3 output
Color Match	Generates data for color-matching proofs to final output
Copydot	Optimizes copydot files for output
CTLW Output	Generates CTLW output
Generate	Creates Version pages
Vector Output	Creates output in a vector DCS format
Import/Export	Exports all or part of a job to a compressed file for import into another Prinergy system. Also imports imposition plans, populated job tickets (imposition plans with job pages already assigned to page positions), and compressed files exported from Page Assigner.
Marks	Replaces marks variables
Normalize	Converts PostScript language files to PDF and performs font management and font handling
Optimize	Optimizes PDF files into digital masters that are suitable for print and checks conditions such as compression and downsampling
Proofing Device (256MB)	Creates low-resolution output to file
Proofing Device (512MB)	Creates high-resolution output to file
Proofing Device Extended	Creates output files using the 64 bit APPE Rip
Preflight+	Preflights PDF pages
Trap	Performs trapping in Prinergy

Insite Proofing Device (256MB)	Creates low-resolution output that is suitable for proofing in InSite
Insite Color Match	Generates data for color-matching proofs to final output in InSite
Register	Adds pages to the Oracle database during the Refine or Bypass Refine operations

2. In the **Name** box, type a name for the JTP pool.

Tip: Give a JTP pool a unique name. To help you easily identify JTP pools in your system, including the following information:

- Pool type—for example, Color Match
- The word "Pool"
- Number of JTPs in the pool—for example, 3
- Other unique identifiers—for example, include "No Primary" to indicate that a pool does not include any JTPs on the Prinergy primary server

For example: Color Match Pool 3, Trap Pool No Primary

3. In the **Selected JTPs in the pool** box, select the JTPs you want to include in this pool.
Important: All JTPs in a pool must have the same features selected.
4. Click **OK**.
