

Setting up a generic UNIX tertiary server

Configure a computer that uses a type of UNIX operating system software other than Xserve as a tertiary server in the Prinergy system.

- If the Hummingbird NFS Maestro Client software or SFU (Services for UNIX) software is installed on the Prinergy primary server, uninstall it.

Important: Kodak does not provide direct support for UNIX servers that are used as Prinergy tertiary servers. Limited support for non-Kodak servers is available in this guide.
