

Controlling how long history logs are kept

Control how long history entries and database reports are kept before Prinerger deletes them. Reducing the time Prinerger keeps history entries helps free disk space.

1. From the **Tools** menu, select **Configure System**.
2. In the Configuration Options dialog box, click the **History Logs** tab.
3. Set the following options, entering a value between 7 and 99999 days:

Setting	Specifies
All History Entries	How many days history entries are kept before they are permanently deleted from the Prinerger system. You can configure your system to delete non-essential history entries on a regular basis. The default setting is 99999 , which means logs are kept indefinitely.
Database Reports Entries	How many days database reports are kept before they are purged from the Prinerger system The default setting is 99999 , which means logs are kept indefinitely.
Non-Essential History Entries	How many days non-essential history entries are kept before they are deleted from the Prinerger system. These entries are predetermined by the system; you can't specify which entries are non-essential. The default setting is 30 days.
Log all page assignments to history	Include all page assignments and unassignments in the history log. The default is off. Note: This option causes your history log to increase in size much faster.
Log all page deletions to history	Include all page deletions in the history log. The default is off. Note: This option causes your history log to increase in size much faster.

4. Click **OK**.
