

Defining the default job color setup

Define the default job color setup that Prinergy automatically applies each time a job is created. You can also enable ColorFlow by default for all new jobs.

When a new job is created, the color setup will appear by default in the **ColorFlow** section in the Set Job Attributes dialog box.

1. From the **Tools** menu, select **Configure System**.
2. In the Configuration Options dialog box, click the **Job Creation Defaults** tab.
3. The **Default Job Color Setup** list displays color setups from the Approved Snapshot or the Current State. Select a color setup is selected in this list, so that new jobs will have this color setup selected by default.
4. Click **OK**.

Changes affect new jobs only—not existing jobs.
