

Connecting to Administrator on another server

Use Administrator software on one primary server to connect to the Administrator software on another primary or secondary server.

This is useful when you are working on one Prinerger system and you want to start or stop a server in another Prinerger system without moving to the other Prinerger system.

1. From the **File** menu, select **Connect to Server**.
2. In the **Enter the name of the Prinerger server** box, enter a server name (for example, **Secondary**).
3. In the **Logon As** box, type your user name and password.
Note: You must log on with an account that has administrator privileges.
4. Click **OK**.
