

Appendix 3—Installing Antivirus Software

Antivirus software is an important tool for protecting your Kodak Workflow server from virus threats.

Kodak qualifies Symantec Endpoint Protection software, Symantec Endpoint Protection SBE (Small Business Edition), and McAfee Endpoint Protection, and SentinelOne (unmanaged) antivirus software with Prinergy Workflow products. Other antivirus software products have not been tested/qualified with Prinergy Workflow products and may affect the performance and operation of Prinergy's processes.

For the latest information on qualified antivirus software and recommended installation instructions, please refer to Kodak Customer Portal answer *Installing Antivirus Software on Kodak Workflow Servers* ([Answer ID 14221](#)) (requires login to Kodak Customer Portal).
