

Exporting a rule set

1. In Rule Set Manager, in the **Rule Set Library** list, right-click a rule set or a rule set group, and select **Export**.

Tip: If you want to include several rule sets in the same export file, move the rule sets into the same group before you start exporting.

2. In the Export dialog box, browse to a destination folder.
3. (Optional) Change the file name for the compressed file.
4. Click **Save**.

The rule sets are exported as XML files inside a compressed .zip file.

Tip: After exporting the rule sets, you can add non-RBA files to the compressed file—for example, files to assist your support representative with troubleshooting. When you import the rule sets into RBA, the non-RBA files are ignored.
