

Setting the languages of the Preflight+ report

You can set the language(s) of your generated Preflight+ reports in Setup (**Preferences > General** tab) or in Prinerger Administrator. (**Tools > Configure System > Preflight+ Settings** tab).

1. In Workshop, from the **Tools** menu, select **Setup**.
2. In Setup, in the left pane, under **Setup**, click **Preferences**.
3. On the **General** tab, in the **Preflight+ Settings** section, under **Report Language**, select the check box/es of the language/s that you want to generate Preflight+ reports in.

Notes:

- When you run Preflight+, Prinerger runs the Preflight+ process and generates a separate PDF report in each of the languages chosen in **Preferences > General tab > Preflight+ Settings > Report language**. To open and view any of the reports, go to `<server>\Jobs\<jobName>\System\PreflightCallasReport`. Reports that were already viewed are located in `<server>\Jobs\<jobName>\System\PreflightCallasReportWorking`.
- The report displayed when you right-click the page and select **Preflight+ Input Files Report Viewer** or **Preflight+ Refined Report Viewer** from the **Job** menu in Workshop, is in the language of your Prinerger client. If your client's language was not chosen in Preferences or if it is not supported by Preflight+ (that is, the client's language is not included in the **Report Language** check boxes in Preferences), the report is displayed in English. If the **English** check box is not selected as one of the **Report Language** options in Preferences, Prinerger displays the report in one of the selected languages.
- Insite requires XML to be on in order to view reports in Smart Review. To create XML for all languages please contact your service representative and reference article ID 75005. Creating XML for all languages is useful for Multilingual customers where you want all languages to be available in XML but only 1 local language in PDF format for your Workshop users (to save disk space)
