

Viewing or editing pages

Important: Make sure you delete all the traps in a PDF file before changing the content. You may be unable to delete traps after editing the content. As a result, the traps may remain in the file, possibly appearing as errors in the printed product.

1. In Job Manager, in the **Pages** pane of the **Pages** view or **Signatures** view, click the PDF page you want to view.
2. Perform one of the following actions:
 - From the **File** menu, select **Open in Adobe Acrobat**.
 - Double-click the PDF page you want to view.

Adobe Acrobat is activated and displays the PDF page.

Note: You must have the job share mounted before double-clicking the PDF page.

When you edit a page with Adobe Acrobat, the system does not update the thumbnails displayed in Job Manager. If you want to update the thumbnail images, you must refine the PDF page using a refine process template that has the **Thumbnail** section selected.
