

Deleting traps

You should delete traps from PDF pages before editing the pages because you may be unable to delete traps after editing PDF page content. As a result, the traps may remain in the file, appearing as errors in the printed product.

1. In Job Manager, in the **Pages** pane of the **Page** view, double-click a page to start Adobe Acrobat.
2. From the **Tools** menu in Adobe Acrobat, select **Kodak Tools > Kodak PDF Trap Editor**.
3. Click **Delete all traps**.
4. Close the PDF Trap Editor window.
5. Save the PDF file and close Adobe Acrobat.
